CHAPTER I

ENVIRONMENTAL PROTECTION, SAFETY, AND HEALTH PROTECTION STANDARDS

1. PURPOSE. This chapter sets forth the environmental protection, safety, and health protection standards that have been adopted for use throughout the operations of the Department of Energy, hereafter referred to as the Department.
2. GENERAL REQUIREMENTS.
 - a. Provisions of this chapter shall be followed during facility design, construction, operation, modification, and decommissioning. Existing facilities need not be changed arbitrarily to comply with the specified standards except as required by law.
 - b. This chapter covers the minimum prescribed standards to be used by the Department of Energy and Department contractors. Where a Department contractor is also a Nuclear Regulatory Commission licensee, the contract relationship will not exempt him from compliance with Nuclear Regulatory Commission regulations and the terms of his license. Where Department of Energy contractors are tenants on a military installation and a Host-Tenant Agreement has been executed, the standards established by the host shall be observed unless the Department prescribed standards provide for greater protection, in which case Department standards shall be observed. Facilities covered by this chapter include those owned, leased or otherwise controlled by the Department of Energy or leased by contractors for use in work, and include those of either a permanent or temporary nature (e.g., trailers, rented spaces, field sites). Ordnance operations shall observe Department of Defense Explosive Safety Board Standards as prescribed standards. Naval Reactors Program applications shall observe Department of Navy Standards as prescribed standards.
 - c. In addition to the prescribed and recommended standards set forth by this chapter, the user should also consult the other chapters of this order and for the Operational and Environmental Safety Division for any interim standards approved for use. The sources of supply for the standards and a glossary of abbreviations are contained in Attachment 1. The latest edition of the listed standards shall be used.
 - d. If there are conflicts between prescribed standards in this chapter, or between this chapter and other chapters of this order, the standards providing the greater protection shall govern.

3. PROCEDURES FOR GRANTING EXEMPTIONS.

- a. Department of Energy contract administrators are permitted to grant exemptions, which are valid for a period of six months, from the standards of this chapter, except for the Federal regulations listed herein unless allowed by the procedures identified in paragraph 3c. Contract administrators are required to notify the Director, Occupational and Environmental Safety Division of all such exemptions granted. Exemptions for periods greater than 6 months must be approved by the Director, Occupational and Environmental Safety Division prior to being granted by the contract administrator.
- b. Exemptions are considered to be temporary, allowing time to take corrective action. When requesting approval of exemptions greater than 6 months, Department of Energy contract administrators should include with their request plans to ameliorate the conditions requiring the exemptions.
- c. Those Department of Energy Operations subject to the Occupational Safety and Health Administration's regulations, directly or through Departmental Orders, must follow the procedures of 29 CFR 1960, Subpart C, 29 CFR 1905 or Departmental Order DOE 5483.1, as appropriate, to obtain relief from standards listed herein which are also listed in 29 CFR 1910, 1915-1918 and 1926. Requests are to be forwarded to the appropriate Department of Energy official as defined in Departmental Orders DOE 3790.1 or DOE 5483.1.
